

PLAN OF ACTION

My life in college began as a Tech fanatic. I always believed "Big journeys begin with small steps!" and accordingly have utilised the opportunities that come on my way.

I have always been a team enthusiast and aimed at inspiring people around me. As a member of the IEDC BIT, I have learnt to formulate my ideas into reality. I am applying for the **post of Vice President (Technical)** because I believe that our college has a scope of improvement when it comes to the application of knowledge in the real-world scenarios hence I would like to make efforts through my plan of action and mode of conduct for the same.

I will make sure to enhance the confidence, emphasize the ideas of my team members by providing them with the necessary support and motivating them to be innovative; Also will like to conduct many events to help my team members to improve their soft skills which play an important role in personality development.

In the beginning, every student will be confused due to lack of mentorship. I will fill this space by organising club meetings and sharing team members' experiences to build-up the enthusiasm and quest for learning. I will be available for them in-person and through many social media platforms.

I also promise to bring harmony, positive attitude, social grace and friendliness among the team members by engaging them into projects and competitions of their respective interests.

The updates of Hackathons, Internships, Technical quizzes, on-going events and projects will be provided by me to encourage the club members to participate and provide them with an opportunity to extemporize.

In this journey, I would also like to improvise my leadership qualities, communication skills and also Entrepreneurial thinking by actively conducting Brainstorm and club meetings.

{ Currently, I am working on a website for our college which provides easy access to notes and other study materials to the students so that e-learning becomes time-efficient and for this, I would like to team-up with the aspiring students and work towards the goal creating an impact on our college. }

MODE OF CONDUCT

Updating team members about the open source projects.

Bi-Weekly Tech Talks by Industry experts .

Teaching the use of basic version control systems like git and its importance.

Weekly Coding Competitions on differen coding platforms for interested members.

Equally giving importance to the personality development by engaging members in small tasks.

Preparation for different Hackathons.

Implementing the acquired knowledge during Brain-storm by creating projects.
